

Project #1

To create graphics to be placed onto a metal stand for car show exhibits.

Graphics are superimposed onto an image of the client's metal stand that would hold a transmission system and shows the client what the final product would look like at their car show in Germany. The stand and graphics were shipped to Germany to be installed together prior to the client arriving from America, so this gave them a chance to see the final product before printing.

The stand

Page 5

Page 2

(following are images of the client's Fax of ideas)

As you can read on a Testimonial of ours, this client compliments us on being able to interpret what they want with very few questions or revisions.

These graphics will also show our client's instructions to us and will let you know how having a local designer or local webmaster is not necessary. Working through phone calls and emails works out very well.

Graphical layouts are very intricate and clients must allow some artistic freedoms.

Project #3

To create a full page magazine Ad to go into XK Club's magazine.
